Who Will Benefit?

- People working in plastics production, materials supply and other industries which supply to or purchase from plastics manufacturers.
- Newcomers to these industries, or those who have had no formal technical training.
- Managers and professionals in areas such as sales, marketing and other roles where a knowledge of plastics materials and processing technologies would improve confidence and communication, with customers, suppliers and colleagues.

2009 Certificate Course in Plastic Processing Technology

This course has been developed to support people with little or no knowledge of plastics (whether newcomers or those with no previous formal training) working in plastics manufacturing or downstream industries and will introduce participants to the fundamentals of Plastics technology.

The course will provide a sound introduction to Plastic materials and their properties. It covers the fundamental aspects of Plastic technology in a logical manner, from Material Selection, Compounding, Processing (conversion of raw materials into finished products).
Course Overview

- Basic polymer science relative to understanding plastics.
- The properties of plastics materials and their relation to other materials.
- The role of additives.
- The technologies by which plastics are processed into finished products.
- Why certain plastics are used in various applications.

What could I do after?

Here are some of the things that you could go on to.

- Apprenticeships & jobs in manufacturing and product industries.
- Further and higher education.
- Courses: Foundation Degrees.
- Higher National Diploma.
- Advanced or Progression Diploma.

Entry Requirements

The minimum qualification required to attend this course is F.Sc, DAE.

Fee and Charges

The cost of this course is Rs 10,000.

Course Duration

The duration of certificate course is 6 months, with two days a week.

You will also work on a project based on a real-life situation in the manufacturing and product design sector.
